

3D SCANNING CAPABILITIES

Both a portable 3D scanner and a rotor arm tabletop scanner allow nyb to take quick, precise measurements in-field or our in our laboratory. Our field service technicians are trained and knowledgeable on how to use our portable 3D scanner to model components in the field to within 0.0012" accuracy. Using reverse engineering, the scan enables nyb to design & build replacement/upgraded components for any manufacturers' products.

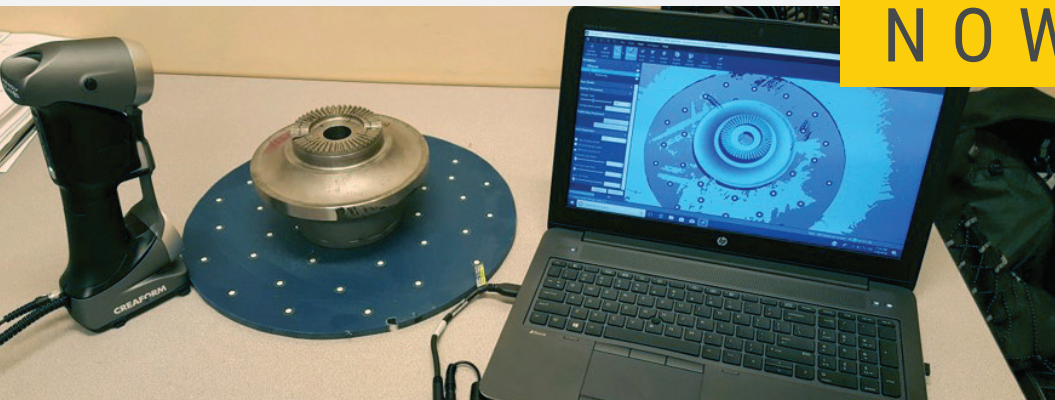

RECENT JOBS INCLUDE

- Replacement parts for facilities with large, high-wear, process critical blowers (including steel mills, cement plants, & coal fired plants).
- Facilities that have a scheduled shut down and are looking to increase efficiency, performance, or are concerned about the longevity of their current equipment.
- Replacement axial impeller blades.
